

iHelix on premises

In this model, Sajix implements iHelix at customer data center behind customer's firewall. Customer is responsible for procuring and managing hardware, other third party software.

Sajix provides license of iHelix to customer and customer owns and manages the software. Sajix also provides user support and maintenance of software.

Advantages

Database and operation system independent :

- ▶ iHelix can be deployed on any relational database and any operating system, which make customer to iHelix on their existing infrastructure.

Control over data :

- ▶ In this model, customer has full control of data and building additional reports become easier.
