

iHelix MD

iHelix MD product suite is available in two different delivery models-in-house server or web-based ASP. Again, this allows our physician clients to choose the model that best suits their specific needs. Because iHelix MD can be automatically integrated with the iHelix Hospital system, patient Information and common data can be easily shared among healthcare providers and facilities.

iHelix MD - Integrated Healthcare system for Physician office

iHelix MD provides an integrated suite of solutions for physician practices and clinics. These modules provide complete functionality for patient management and patient care documentation.

The iHelix MD practice management system provides modules for patient accounting, patient management, and a sophisticated EMR for patient care documentation. Our iHelix MD suite of applications seamlessly integrates the administrative, financial, and clinical system needs of physician practices and clinics.

On demand :

The application is available from Sajix data center on ASP module (web based).

On premises :

The application is deployed at clinic's data center and managed by clinic IT.

Mobile clinic :

This is offline mode, where mobile clinic can use it in standalone mode.

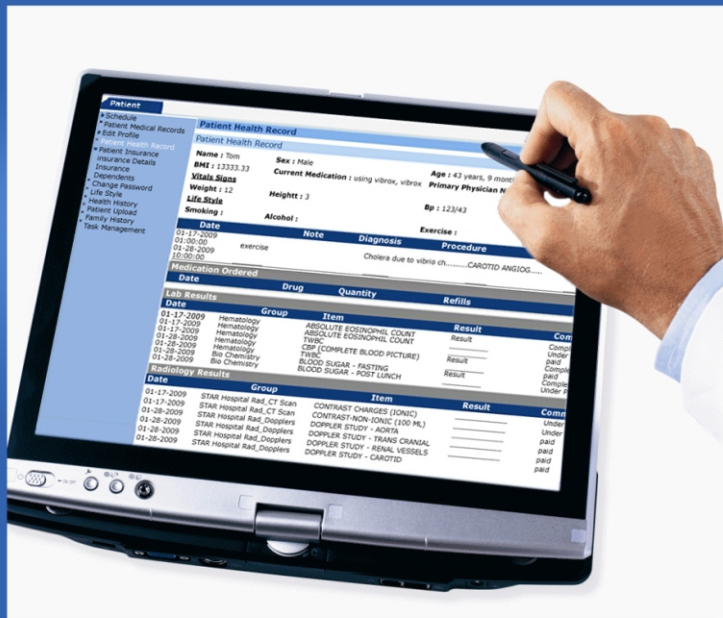

Real Time Billing :

Balance billing is a medical billing practice increasingly instituted by healthcare providers to cover the cost of services rendered. If your doctor uses balance billing, it would bill you for any amount covered by your insurance.

iHelix MD EMR

An electronic medical record (EMR) is usually a computerized legal medical record created in iHelix that delivers care, such as a hospital and doctor's surgery. Electronic medical records tend to be a part of a local stand-alone healthcare information system that allows storage, retrieval and manipulation of records.

iHelix MD EMR

Electronic Medical Record (EMR) is the central depository for all patients' information. The EMR provides caregivers nurses, physicians, and other allied health professionals. A comprehensive view of patient information including, demographic, historical and clinical information. Information from all care settings within a healthcare system- physician's offices, clinics, hospitals, home health practices and long-term care is stored and available through the patient's electronic medical record.
